In Regards to petition RM-10740.

**The petition should be Rejected** and I would like to ad the following facts:

I, Anthony Whitmore, on numerous occasions have witnessed the following:

On a freq on or near 14.178 have witnessed radio stations begin communications, with a clear passband and no other stations within 5 or 6 above or below 14.178. Shortly after these individuals would begin communications, One or more of the petitioners: Michael Lonneke W0YR, Melvin Ladisky W6FDR, W2OT Martin J Bellingeri, K2QBV Joel H Kornreich would begin communications on 14.180 give or take a few kilohertz. The petitioners would do this intentionally do CLAIM that they were being interfered with. Again this has happened on more than one occasion and to numerous occasions to count.

I mention the above intentional interference, to show the commission the type of character the petitioners have.

I would also like to ad that this complaint and request for limited bandwidth is based on a personal vendetta that the petitioners have against a mode of operation they deem unnecessary and excessive.

The petition that is before the commission IS NOT in the best interests of the Amateur Radio community nor is it in the best interest in the advancement of Amateur Radio. This is strictly and entirely before the commission in the interest of a W0YR and his " Crew" . The petitioners desire this petition out of hatred. Do not allow the rest of the Amateur Radio community to suffer due to a few individuals that can't get along.

If the commission passes this petition, what will W0YR and W6FDR petition the commission for next? I would assess that if it is not in their best interests it will be in front of the commission for a ruling.

I request the commission allow and acknowledge the advancement of Amateur Radio and reject RM-10740.

Respectfully,

Anthony Whitmore (NOPG)
